

D1
cat

a plurality of attachment components adapted to be assembled into a plurality of attachment means each of a different configuration for attaching said shaft holder to the surface, at least one of said attachment means comprising the assembly of less than all of said plurality of attachment components, provided that all of said plurality of attachment means at least includes said shaft holder.

63. (Twice Amended) An apparatus of mounting a device to a supporting surface, the apparatus comprising:

D2

a shaft holder including a bottom having a first hole formed therein and an open top forming a receptacle therein for receiving the device, wherein the device is removably positionable within said shaft holder;

a threaded rod positioned to extend through said first hole;

a nut in threaded engagement with said threaded rod; and a plurality of attachment components adapted to be assembled into a plurality of attachment means each of a different configuration for attaching said shaft holder to the surface, at least one of said attachment means comprising the assembly of less than all of said plurality of attachment components, provided that all of said plurality of attachment means at least includes said shaft holder.

67. (Twice Amended) A system for mounting a device to a supporting surface using one of a plurality of devices each of a different configuration that can be assembled from the system, the system comprising:

D3

a shaft holder including a bottom having a first hole formed therein and an open top forming a receptacle for receiving the device, wherein the device is removably insertable into said receptacle;

a plurality of threaded rods;

a nut;

a clamping plate;

a first member having a first flange and a second flange generally perpendicularly attached to said first flange, said first flange having a second hole formed therein, and said second flange having at least a third hole formed therein; and

314
D cont

a second member having a third flange and a fourth flange generally perpendicularly attached to said third flange, said third flange having a fourth hole formed therein, and said fourth flange having at least a fifth hole formed therein; said shaft holder, said plurality of threaded rods, said nut, said clamping plate, said first member and said second member comprising attachment components adapted to be assembled into said plurality of devices, at least one of said plurality of devices comprising the assembly of less than all of said attachment components provided that all of said plurality of devices at least includes said shaft holder.

Sub
1297

72. (Amended) An apparatus for mounting a device to a supporting surface, the apparatus comprising:

4

a shaft holder including a bottom and an open top forming a receptacle therein for receiving the device, wherein the device is removably positionable within said shaft holder;

a threaded rod positioned to extend from said bottom surface of said shaft holder; and

a plurality of attachment components adapted to be assembled into a plurality of attachment means each of a different configuration for attaching said shaft holder to the surface, at least one of said attachment means comprising the assembly of less than all of said plurality of attachment components, provided that all of said plurality of attachment means at least includes said shaft holder.

73. (Amended) The apparatus as described in claim 72, wherein at least one of said plurality of attachment components is attached to said threaded rod.

Insert new claims 74-78 as follows:

74. (New) The apparatus as described in claim 36, wherein said threaded rod comprises a bolt or a screw.

75. (New) The system as described in claim 50, wherein said thread rods comprise bolts or screws.

76. (New) The apparatus as described in claim 63, wherein said threaded rod comprises a bolt or a screw.

77. (New) The system as described in claim 67, wherein said threaded rods comprise bolts or screws.

78. (New) The apparatus as described in claim 72, wherein said thread rod comprises a bolt or a screw.
